

DEVIN KERN

(530) 591-3685 ♦ Chico, CA 95926

devinkern@gmail.com

SUMMARY

Results-driven professional skilled in collaboration, process improvement, and technical analysis. Adept at managing priorities, adapting to change, and explaining well-researched solutions. Willing to work individually, or in a group. Willing to relocate

TECHNICAL SKILLS

Languages: Java, C#, JavaScript, Python, SQL, HTML, CSS, and C/C++

Frontend: React, Web Audio API, Bootstrap

Backend: Spring Boot, Node.js, REST APIs

Databases: PostgreSQL, MongoDB

Scripting Languages and Tools: BASH, PowerShell, Git, Docker, Jira, and OpenCode

Software Development Testing Libraries: JUnit, Cargo Test, Google Test, and Pytest

Testing Practices: Integration testing, Unit Testing, Writing Test Scripts

Concepts: Agile Software Development Life Cycle (SDLC), Debugging

PROFESSIONAL EXPERIENCE

Neighborhood Nerds - Remote Help Nerd

November 2024 - Present

Supervisor: Leonard Knight (leonard.r.knight@leonardknight.com)

Duties:

- Delivered clear explanations of software functionality for users with varying technical backgrounds.
- Served as first point of contact for clients, to schedule and resolve issues with appropriate support group.
- Documented and recorded incident details and initial troubleshooting steps for successful resolution.
- Successfully troubleshoot client software, hardware, and peripheral issues.
- Used hardware monitoring tools to analyze laptop performance and system resources
- Used remote tools such as Splashtop to navigate customers' laptops or other technologies to troubleshoot.

EDUCATION

B.S. in Computer Science

December 2023

San Francisco State University, GPA: 3.47

San Francisco, CA

Awards: Dean's List, 3 semesters

Associate in Science for Transfer in Computer Science

May 2021

Butte College, GPA: 3.35

Oroville, CA

Location: Oroville, CA

PROJECTS

ML Image Recognition (Python, TensorFlow)

Trained a model for object recognition on a labeled dataset. Achieved accurate predictions and explored hyperparameter tuning for performance optimization. This was part of a class titled "Interdisciplinary Machine Learning for Data Science."

Web Application following Agile Development Cycle

Created a web application during a semester following Agile Software Development Life Cycle (SDLC). Performed unit and application analysis, testing, and troubleshooting. Documented non-functional requirements and set a release schedule.

Online Card Game (JavaScript, Node.js)

Developed a real-time multiplayer Texas Hold'em clone using WebSockets for live communication. Implemented server-side game logic and state synchronization. Game state stored in PostgreSQL.

GarageBand-Inspired Web App (JavaScript, Web Audio API)

Created an interactive browser-based instrument player with dynamic sound generation and UI controls. Also required the use of an SQL db.
