

# DEVIN KERN

(530) 591-3685 ♦ Chico, CA 95926

[devinkern@gmail.com](mailto:devinkern@gmail.com) ♦ <https://github.com/DevinLKern>

## SUMMARY

---

Motivated Computer Science graduate with hands-on experience supporting applications and a strong foundation in software development. Strong communication, writing, and critical thinking skills, with experience communicating to audiences of varying technical backgrounds. Self-starter who works effectively both independently and in teams. Experienced debugging, testing, and documenting programs. Willing to relocate.

## TECHNICAL SKILLS

---

**Languages:** C, C++, C#, Rust, Python, JavaScript, SQL, XML, HTML, CSS

**Development Practices:** Agile SDLC, version control, unit testing

**Software & Tools:** Git, CMake, PostgreSQL, MongoDB, Docker, Node.js

**Libraries & Frameworks** pandas, numpy, matplotlib, SimpleITK, Tensorflow, scikit-learn, and Vulkan

**Other Skills:** Experience using Linux, Knowledge of the SDLC and REST APIs

## EDUCATION

---

### B.S. in Computer Science

San Francisco State University, GPA: 3.47

Awards: Dean's List, 3 semesters

**December 2023**

*San Francisco, CA*

### Associate in Science for Transfer in Computer Science

Butte College, GPA: 3.35

Location: Oroville, CA

**May 2021**

*Oroville, CA*

## PROFESSIONAL EXPERIENCE

---

### Neighborhood Nerds - Remote Help Nerd

**November 2024 - Present**

**Supervisor:** Leonard Knight ([leonard.r.knight@leonardknight.com](mailto:leonard.r.knight@leonardknight.com))

#### Duties:

- Delivered clear explanations of software functionality for users with varying technical backgrounds.
- Served as first point of contact for clients, to schedule and resolve issues with appropriate support group.
- Documented and recorded incident details and initial troubleshooting steps for successful resolution.
- Successfully troubleshooted client software issues.
- Worked with hardware tools related to monitoring and supervision of laptop resources.
- Used remote tools such as Splashtop to navigate customers' laptops or other technologies to troubleshoot.

## PROJECTS

---

### Biomedical Image Analysis System

Developed a biomedical image analysis system for analyzing chest CT scans of COVID-19 patients using public datasets, including the design, implementation, and evaluation of image processing algorithms with SimpleITK (Python) in a collaborative group environment.

### ML Image Recognition (Python, TensorFlow)

Trained a model for object recognition on a labeled dataset. Achieved accurate predictions and explored hyperparameter tuning for performance optimization. This was part of a class titled "Interdisciplinary Machine Learning for Data Science."

### 3D Model Viewer (Vulkan)

Wrote a Wavefront OBJ model viewer in Rust using Vulkan. Wrote an OBJ and MTL file parser, and a Mathematics Library.

### Web Application following Agile Development Cycle

Created a web application following the Agile SDLC. Required us to perform unit and application analysis, testing, and troubleshooting
